Fetal and Maternal Patient Monitor

Every Beat Matters

Optimizing User Experience in Advanced Fetal Monitoring Systems

Multiple Display Options

With three distinct monitoring screens—Maternal & Fetal, Fetal, and Maternal—users can swiftly switch between interfaces using intuitive touch screen controls. It allows nursing staff to assess maternal physiological parameter data while monitoring the fetal condition.

"Soft and Simple" Design

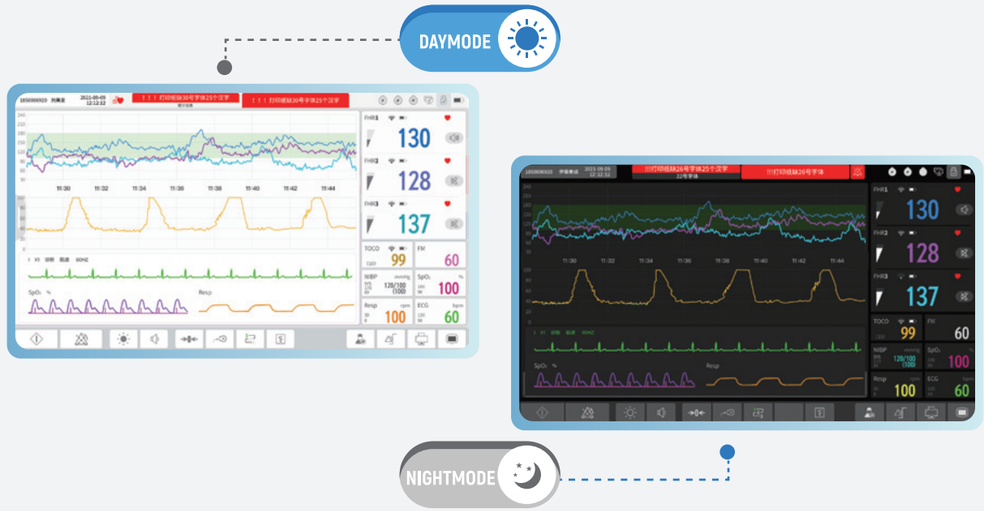
The use of warm color parameters, multiple color modes can create a warmer user interface and decease the work anxiety of medical staff.

Interface Switching

Combine more interaction techniques like two-finger sliding and page edge sliding, which are more like mobile devices. It can increase user productivity by 50% and encourage user to explore more easily.

Multiple Custom Interface Options:

Multiple Custom Interface Options: Supports customizable parameters and waveform display colors, with two interface color styles provided for user selection. Providing a variety of visual experiences while ensuring clear display in all circumstances, offering healthcare professionals the ultimate user experience and operational comfort.

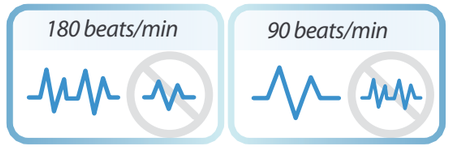


Enhanced Stability: Advanced Features for Streamlined Monitoring

Fetal Care and Materal Care Monitoring

Advanced Algorithms

Benefit from algorithms that mitigate false alarms caused by fetal movement, ensuring accurate monitoring.



CTG Scoring System

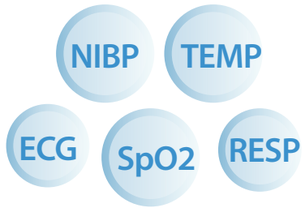
Choose from seven scoring criteria—KREBS, Fischer, Modified Fischer, NST, NST Report, NST Three-level Sorts Report and Oxford for comprehensive assessment.

Fetal Heart Signal Indicator

With three-level signal strength display, quickly locate fetal heart signals and adjust transducer positions for optimal measurement quality.

Maternal Parameter Measurement

Monitor maternal parameters including ECG, SpO2, NIBP, RESP and TEMP alongside fetal monitoring for comprehensive care.

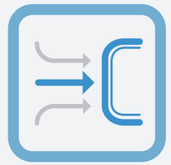


12-Crystal Transducer

CF5R and CF8R offers 12-crystal transducer enhances sensitivity and stability, providing high-quality monitoring even in challenging conditions.

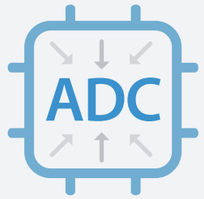
Shielding Cover

Shielding cover on the essential circuits can improve probe interference resistance to ensure signal stability and high-quality of FHR detection.



24-bit ADC Chip

The 24-bit ADC chip can capture strong and weak analog signals more easily, making the acquisition results more accurate.



Enhanced Flexibility with Innovative Wireless Sensor System

Advanced wireless sensor technology revolutionizes fetal monitoring, offering unparalleled convenience and flexibility.

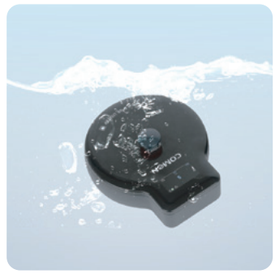
US3

TOCO

Waterproof Durability

Boasts an IP68 waterproof rating, making it suitable for underwater labor usage without compromising performance.



The Structure of Probe Holder

The hanging and unplugging methods are easy to understand and operate. When hanging up and pulling out, the force is moderate, and there will be a "click" sound on the structure, which can clearly determine whether the plug is in place.

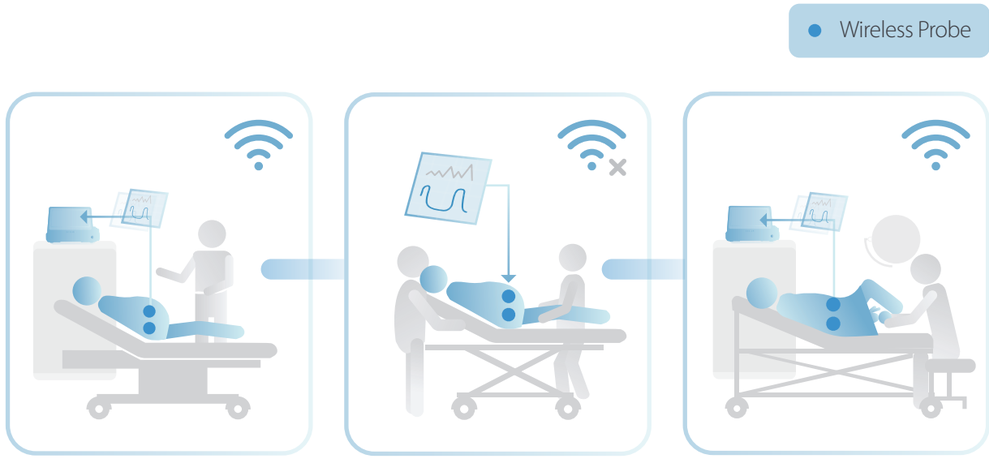
Seamless Integration

Wireless transducers provide medical staff with a tidy workplace. Also, it can reduce the workload of organizing cables and increase the efficacy of work.

For pregnant, wireless monitoring can improve the comfort and flexibility restricted by cords.

Effortless Transfers

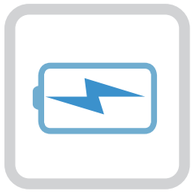
The wireless probe is equipped with a power off storage function of no less than 10 minutes, ensuring the continuity of saving monitoring data. Thus, it enables effortless transfers from the prenatal room to the delivery room without the need to change transducers. When the wireless transducer is taken to the delivery room from prenatal room, the transducer will connect to the new fetal monitor and upload the data to the new machine.



Ease the Work

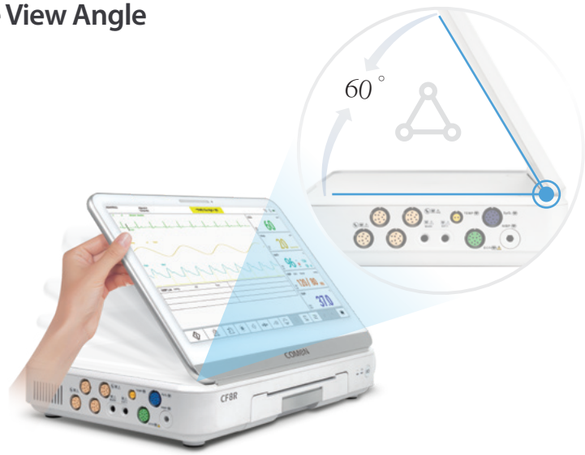
Long-lasting Battery Life

Equipped with a high-capacity internal battery, these monitors can operate for extended periods without requiring a power source.



Large Screen with Adjustable View Angle

Experience unparalleled versatility with a super-sized screen, adjustable view angle and stable axis, catering to diverse monitoring needs of medical professionals.



Hidden Handle Design

Combining functionality with aesthetics, the concealed handle allows for easy portability while maintaining a sleek appearance.

CF5R

CF8R

Effortless Data Management and Flexible Transfer

Scanner-assisted Patient Data Entry

Simplify patient data input with scanner compatibility.

Versatile Printing Options

Built-in or external network printers encourages convenient data output.

Efficient Data Storage

Automatically saving patient data every 10 minutes, the monitor ensures seamless record-keeping. With a capacity to store up to 24 hours of data per record, the CF5R and CF8R guarantee comprehensive data management.

Unlock the power of seamless data transmission and integration with the CF Series Fetal Monitors.

Enhancing your clinical workflow and expanding your reach for comprehensive patient care.
